Majestic Jay Peak

Have you noticed, since the beginning of your journey, that our mountain peaks are rounded, unlike those of the Alps, for example? This was caused by the erosion left by receding glaciers, some ten thousand years ago.

Imposing Jay Peak, that you see beyond the American border, provides a good example. It is one of the highest summits in New England.

At 1,176-metres high, Jay Peak is renowned for its vast ski area. It receives more snow than any other ski hill in eastern North America, with an average annual snowfall of 9 meters! While located in Vermont, Jay Peak beautifully complements the Eastern Townships' snow sports offer.
